The Sumatran Rainforest Will Mostly Disappear Within 20 Years

by John Vidal

1 *In only a few years, logging and agribusiness have cut Indonesia's vast rainforest by
2 half. The government has renewed a moratorium¹ on deforestation but it may already
3 be too late for the endangered animals—and for the people whose lives lie in ruin.*

4 Our small plane had been flying low over Sumatra² for three hours but all we had seen
5 was an industrial landscape of palm and acacia trees stretching 30 miles in every
6 direction. A haze of blue smoke from newly cleared land drifted eastward over giant
7 plantations. Long drainage canals dug through equatorial swamps dissected the land.
8 The only sign of life was excavators loading trees on to barges to take to pulp mills.

9 The end is in sight for the great forests of Sumatra and Borneo and the animals and
10 people who depend on them. Thirty years ago the world's third- and sixth-largest islands
11 were full of tigers, elephants, rhinos, orangutan and exotic birds and plants but in a
12 frenzy of development they have been trashed in a single generation by global
13 agribusiness and pulp and paper industries.

14 Their plantations supply Britain and the world with toilet paper, biofuels and vegetable
15 oil to make everyday foods such as margarine, cream cheese and chocolate, but
16 distraught scientists and environmental groups this week warn that one of the
17 21st century's greatest ecological disasters is rapidly unfolding.

18 Official figures show more than half of Indonesia's rainforest, the third-largest swath in
19 the world, has been felled in a few years and permission has been granted to convert
20 up to 70% of what remains into palm or acacia plantations. The government last week
21 renewed a moratorium on the felling of rainforest, but nearly a million hectares are still
22 being cut each year and the last pristine areas, in provinces such as Aceh and Papua,
23 are now prime targets for giant logging, palm and mining companies.

¹ moratorium: a temporary stop of an activity

² Sumatra: an island in Western Indonesia

24 The toll on wildlife across an area nearly the size of Europe is vast, say scientists who
25 warn that many of Indonesia's species could be extinct in the wild within 20–30 years.
26 Orangutan numbers are in precipitous decline, only 250–400 tigers remain and fewer
27 than 100 rhino are left in the forests, said the International Union for Conservation of
28 Nature.

29 Millions of hectares are nominally protected, but the forest is fragmented, national
30 parks are surrounded by plantations, illegal loggers work with impunity³ and corruption
31 is rife in government. "This is the fastest, most comprehensive transformation of an
32 entire landscape that has ever taken place anywhere in the world including the Amazon.
33 If it continues at this rate all that will be left in 20 years is a few fragmented areas of
34 natural forest surrounded by huge manmade plantations. There will be increased floods,
35 fires and droughts but no animals," said Yuyun Indradi, political forest campaigner with
36 Greenpeace south-east Asia in Jakarta.

37 Last night the WWF's⁴ chief Asian tiger expert pleaded with the Indonesian government
38 and the world to stop the growth of palm oil plantations. "Forest conversion is massive.
39 We urgently need stronger commitment from the government and massive support from
40 the people. We cannot tolerate any further conversion of natural forests," said
41 Sunarto Sunarto in Jakarta.

42 Indonesia's deforestation has been accompanied by rising violence, say watchdog
43 groups.⁵ Last year, more than 600 major land conflicts were recorded in the palm
44 plantations. Many turned violent as communities that had lost their traditional forest
45 fought multinational companies and security forces. More than 5,000 human rights
46 abuses were recorded, with 22 deaths and hundreds of injuries.

47 "The legacy of deforestation has been conflict, increased poverty, migration to the cities
48 and the erosion of habitat for animals. As the forests come down, social conflicts are
49 exploding everywhere," said Abetnego Tarigan, director of Walhi, Indonesia's largest
50 environment group.

³ impunity: exemption or freedom from punishment

⁴ WWF: World Wildlife Fund

⁵ watchdog groups: a group that serves as a protector against illegal practices

51 Scientists fear that the end of the forest could come quickly. Conflict-wracked Aceh,
52 which bore the brunt of the tsunami in 2004, will lose more than half its trees if a new
53 government plan to change the land use is pushed through. A single Canadian mining
54 company is seeking to exploit 1.77m hectares for mining, logging and palm plantations.

55 Large areas of central Sumatra and Kalimantan are being felled as coal, copper and
56 gold mining companies move in. Millions of hectares of forest in west Papua are
57 expected to be converted to palm plantations.

58 “Papuans, some of the poorest citizens in Indonesia, are being utterly exploited in
59 legally questionable oil palm land deals that provide huge financial opportunities for
60 international investors at the expense of the people and forests of West Papua,” said
61 Jago Wadley, a forest campaigner with the Environment Investigation Agency.

62 Despite a commitment last week from the government to extend a moratorium on
63 deforestation for two years, Indonesia is still cutting down its forests faster than any
64 other country. Loopholes in the law mean the moratorium only covers new licences and
65 primary forests, and excludes key peatland areas and existing concessions which are
66 tiger and elephant habitats. “No one seems able to stop the destruction,” said
67 Greenpeace International’s forest spokesman, Phil Aikman.

68 The conflicts often arise when companies are granted dubious logging or plantation
69 permissions that overlap with community-managed traditional forests and protected
70 areas such as national parks.

71 Nine villages have been in conflict with the giant paper company April, which has
72 permission to convert, with others, 450,000 hectares of deep peat forests on the
73 Kampar Peninsula in central Sumatra. Because the area contains as much as 1.5bn
74 tonnes of carbon, it has global importance in the fight against climate change.

75 “We would die for this [forest] if necessary. This is a matter of life and death. The forest
76 is our life. We depend on it when we want to build our houses or boats. We protect it.
77 The permits were handed out illegally, but now we have no option but to work for the
78 companies or hire ourselves out for pitiful wages,” said one village leader from Teluk
79 Meranti who feared to give his name.

80 They accuse corrupt local officials of illegally grabbing their land. April, which strongly
81 denies involvement in corruption, last week announced plans to work with London-
82 based Flora and Fauna International to restore 20,000 hectares of degraded forest land.

83 Fifty miles away, near the town of Rengit, villagers watched in horror last year when
84 their community forest was burned down—they suspect by people in the pay of a large
85 palm oil company. “Life is terrible now. We are ruined. We used to get resin, wood,
86 timber, fuel from the forest. Now we have no option but to work for the palm oil
87 company. The company beat us. The fire was deliberate. This forest was everything for
88 us. We used it as our supermarket, building store, chemist shop and fuel supplier for
89 generations of people. Now we must put plastic on our roofs,” said one man from the
90 village of Bayesjaya who also asked not to be named.

91 Mursyi Ali, from the village of Kuala Cenaku in the province of Riau, has spent 10 years
92 fighting oil plantation companies which were awarded a giant concession. “Maybe
93 35,000 people have been impacted by their plantations. Everyone is very upset. People
94 have died in protests. I have not accepted defeat yet. These conflicts are going on
95 everywhere. Before the companies came we had a lot of natural resources, like honey,
96 rattan, fish, shrimps and wood,” he said.

97 “We had all we wanted. That all went when the companies came. Everything that we
98 depended on went. Deforestation has led to pollution and health problems. We are all
99 poorer now. I blame the companies and the government, but most of all the
100 government,” he continued. He pleaded with the company: “Please resolve this problem
101 and give us back the 4,100 hectares of land. We would die for this if necessary. This is
102 a life or death,” he says.

103 Greenpeace and other groups accuse the giant pulp and palm companies of trashing
104 tens of thousands of hectares of rainforest a year but the companies respond that they
105 are the forest defenders and without them the ecological devastation would be worse.
106 “There has been a rampant escalation of the denuding of the landscape but it is mostly
107 by migrant labour and palm oil growers. Poverty and illegal logging along with migrant
108 labour have caused the deforestation,” said April’s spokesman, David Goodwin.

109 “What April does is not deforestation. In establishing acacia plantations in already-
110 disturbed forest areas, it is contributing strongly to reforestation. Last year April planted

111 more than 100 million trees. Deforestation happens because of highly organised illegal
112 logging, slash-and-burn practices by migrant labour, unregulated timber operations.
113 There has been a explosion of palm oil concessions.”

114 The company would not reveal how much rainforest it and its suppliers fell each year
115 but internal papers seen by the *Observer* show that it planned to deforest
116 60,000 hectares of rainforest in 2012 but postponed this pending the moratorium. It
117 admits that it has a concession of 20,000 hectares of forest that it has permission to fell
118 and that it takes up to one-third of its timber from “mixed tropical hardwood” for its giant
119 pulp and paper mill near Penabaru in Riau.

120 There are some signs of hope. The heat is now on other large palm oil and paper
121 companies after Asia Pulp and Paper (APP), one of the world’s largest such companies,
122 was persuaded this year by international and local Indonesian groups to end all
123 rainforest deforestation and to rely solely on its plantations for its wood.

124 The company, which admits to having felled hundreds of thousands of acres of
125 Sumatran forest in the last 20 years, had been embarrassed and financially hurt when
126 other global firms including Adidas, Kraft, Mattel, Hasbro, Nestlé, Carrefour, Staples and
127 Unilever dropped products made by APP that had been made with rainforest timber.

128 “We thought that if we adopted national laws to protect the forest that this would be
129 enough. But it clearly was not. We realised something was not right and that we needed
130 a much higher standard. So now we will stop the deforestation, whatever the cost. We
131 are now convinced that the long-term benefits will be greater,” said Aida Greenbury,
132 APP’s sustainability director. “Yes. We got it wrong. We could not have done worse.”

133 *This article was amended on 27 May 2013. It originally said Asia Pacific Resources
134 International had been persuaded to end all rainforest deforestation. The company was
135 Asia Pulp and Paper. This has been corrected.*
